The complement system, also known as complement cascade, is a part of the immune system that enhances (complements) the ability of antibodies and phagocytic cells to clear microbes and damaged cells from an organism, promote inflammation, and attack the pathogen's cell membrane. It is part of the innate immune system, which is not adaptable and does not change during an individual's lifetime.

Presentación. La hipersensibilidad de tipo III ocurre cuando existe un exceso de antígenos, comparado con una reacción normal, en relación a la cantidad de anticuerpos presentes; esto conduce a la formación de pequeños complejos inmunes que no son capaces de fijar complemento y por lo tanto no son retirados de la circulación.
